

# Software:

Kali-Linux:

Follow the steps below:

1. Open the link right here: <https://re4son-kernel.com/re4son-pi-kernel/>
2. Scroll down until you see the downloads

Download the file that matches your pi version.

3. Download the Balena Etcher software and open it.

Select a SD card and your Kali-linux OS  
hit **FLASH**

4. When the flashing is done take the sd card and put it into the pi and start it up.
5. The user name is **root** and the password is **toor**
6. Open the terminal and type : psswd and type a new password.

And it's done.
